

Town of York

STANDARD EROSION AND SEDIMENT CONTROL MEASURES

Map _____/Lot _____

1. After clearing the area to be disturbed, erosion control socks or erosion control mix* berms shall be installed and **inspected** before topsoil is stripped. All disturbed areas must be stabilized by temporary or permanent measures, within seven (7) days of initial disturbance and seven (7) days prior to any storm event.
2. Contractor to maintain erosion and sediment control measures throughout the construction project. The contractor understands that the Code Enforcement Office will conduct inspections prior to and after a storm event. Failure to maintain these measures may invalidate your building permit.
3. The developer or contractor shall strip and grade only those areas subject to immediate construction.
4. All topsoil stripped from the area will be stockpiled, temporarily stabilized with erosion control mulch or surrounded by an erosion control barrier until it is spread and final grading is complete.
5. Winter stabilization must be implemented by October 15.
6. Permanent seeding will be done as early as possible in the growing season. Permanent seeding should be made prior to September 21. If seeding cannot be done prior to September 21, overwinter construction shall be used according to the ***Maine Erosion and Sediment Control Practices Field Guide for Contractors Handbook***.
7. The topsoil will be uniformly spread at a minimum compact depth of 4 inches deep over areas to be reclaimed.
8. Hydroseeding is the preferred method for soil stabilization. Slopes must be no steeper than 2 to 1 (2 feet horizontally to 1 foot vertically). Lime and fertilizer may be applied simultaneously with the seed. For other types of seed applications, and allowed grass mixes, refer to the ***Maine Erosion and Sediment Control Practices Field Guide for Contractors*** 2015, MeDEP.

Standard Erosion and Sediment Control Measures
Page 2

9. If seeding does not take at least 80% in any area within 30 days it should be reseeded immediately or temporarily mulched and reseeded within one planting season.
10. Any erosion control mix barriers can be removed upon stabilization of the finished grade and used as additional mulching material.
11. The seeded area shall be inspected by the applicant every seven (7) days and maintained by watering, weeding, mowing (not less than 3 inches), trimming, regrading and replanting as required to establish a lawn free of erode or bare areas.

APPLICANT'S SIGNATURE

DATE

*Erosion control mix can be manufactured on or off the project site, and must consist primarily of organic material, separated at the point of generation, and may include: shredded bark, stump grindings, composted bark, or acceptable manufactured products.

**Contractors DEP Certified in Erosion Control Practices can receive discounts on erosion control materials from five (5) of Maine's erosion control material suppliers. See attached list of suppliers for materials and erosion control mix.

The SIMPLE Erosion and Sediment Control Plan

Use this simple ESC plan for small sites (houselots)

- S** = Stabilize disturbed soils before moving on!
- I** = Install sediment barriers before construction!
- M** = Mulch daily!
- P** = Protect natural buffers!
- L** = Limit the area of soil disturbance!
- E** = Evaluate and repair all erosion controls and sediment measures!

Maine Erosion Control Material Suppliers

There are absolutely no endorsements or approvals of these vendors by the Maine DEP. This list is for information purposes only and all benefits/risk are the responsibility of the buyers. There may be other suppliers the Center is not aware of. If there are other suppliers, the Center would be happy to add them to the list.

* Discount provided to DEP Certified Contractors
